Men wage war against women, it's said, by injecting masosadism continuously into women's minds, – masosadism defined as doubting the validity of one's own being, doubting the validity of other women's being, and the willingness, then, to self-betray.

But masosadism isn't injected into just women's minds. For women who are fucked by men, masosadism is injected literally – chemically – as an arsenal of chemicals in fact – into women themselves. This arsenal of chemicals – which men evolved – this arsenal of chemicals – which all men make – induces women to self-betray.

Sperm swimming in semen

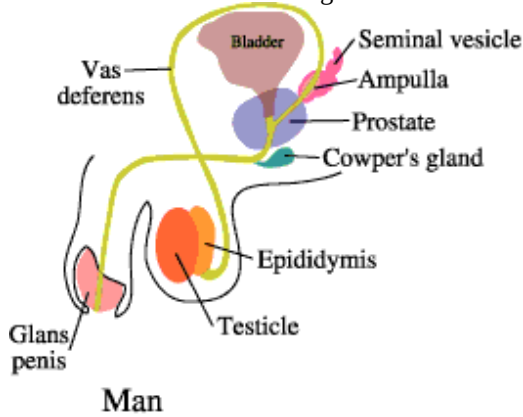

Male ejaculate is composed of: 1). Sperm and 2). Semen.

“Sperm” and “semen” are commonly regarded as the same thing. They are not. While it’s true sperm and semen together compose male ejaculate, sperm and semen are in fact two totally different things.

1). Sperm, those squiggly things that look like tadpoles, are chromosome sets with tails. Males constantly make sperm in their testicles. The number of sperm males make – “sperm counts” – as well as the Y-chromosomes in sperm – are both in steep decline. Sperm constitutes only a miniscule amount of male ejaculate – 1-5%. Sperm is suspended in, protected by and swims via semen.

2). Semen is a cruel brew of liquified chemical compounds. Men constantly make semen in their male accessory glands (the seminal vesicle, the Cowpers gland, and prostate), under the direction of testosterone and other male hormones. Semen, the subject of this post, is not in decline, and is in fact thought to be rapidly evolving. Semen constitutes 95-99% of male ejaculate. This means almost everything which shoots out of an erection is semen.

Semen is an arsenal of chemicals, – an arsenal of chemicals which alter female psychology, behavior and physiology. Over 100 chemicals which alter female psychology, behavior and physiology have been identified in semen thus far. (See [Appendix \(https://trustyourperceptions.wordpress.com/?p=257&preview=true\)](https://trustyourperceptions.wordpress.com/?p=257&preview=true)). Since almost everything which shoots out of an erection is semen, this means almost everything which shoots out of an erection is meant to manipulate, manage and modify women.

Most women of this world are continuously injected with men's seminal chemicals, – as men demand to dick-stick women with insanely-abnormal regularity (for practically all life on Earth, this happens only certain times). This means most women of this world are being continuously *regulated* by the chemicals in semen. *Semen regulates women for men.*

In this piece, Trust Your Perceptions will explain: **I. Male Chemical Munitions** – *what semen does to females*, **II. Shit's Lethal** – *what happens to females prevented from evolving resistance to semen*, **III.**

Past Evolutionary Context for Seminal Engineering – *how females not signaling estrus trumped dudes*, **IV. Present Evolutionary Context of Seminal Sorcery and Investment Planning** – *semen responds to unprecedented barriers*, and **V. Maleness in Context** – *cross-species sperm-transfer-tactics reveals what maleness is*.

*

First, let's remember: Fucking, for a male, is a cloning opportunity. A man's Y-chromosome, – what makes him him (without it, him would be *her*, the biological *norm*), – is the only chromosome which doesn't recombine. The Y-chromosome acts like a clone, but needs a female to copy it into Dude, Jr. Biologically, dude's reason for living is hooking a host who will copy his Y, or as many hosts as he can for the job. The male exists as a genetic parasite. The penis is a chromosome syringe; the testicles, a chromosome lab, the male glands, dude's own chemical weapons factory. "Sex," for dude, is not about chocolate and hearts or mystical unions; sex, for dude, is *all about dude*. (Noticed?) What looks like males being nonstop pervy and promiscuous is actually males trying to get their Y into the endzone to score. The more time in the endzone, the better dude's odds. Male biology has calculated for favorable statistical odds, not investment in aftermath. The more females dude can get his sperm into, the better his odds of getting his Y copied, and if enough time in the endzone results in his Y being copied by more than one female, this increases the genetic variety of his sons, which increases his sons' survival rate, which increases the odds for successful perpetuation of dude's own Y-line. For males, Y-perpetuation is a life-or-death situation, because if a dude doesn't pass his Y, dude's Y dies with dude. This renders all amassed valor in Y-perpetuation by his father's-father's-father, etc. biologically meaningless, – a colossal fail. This is why men call fucking an "urgent need" – and put fucking on par with eating – when, eating, – *completely unlike fucking*, – if you don't do, – *you die*. – This is not, as Dr. Richard Dawkins got genius-rank for claiming, both males' and females' "selfish genes;" it's Dr. Dick's very own megalomaniacal chromosome, Dr. Dick's Y pushing to make more little Ys, Dr. Dick's thrust to make more little dicks. Male and male-identified biologists are blind to the obvious: The male's urgent need to fuck is the biologically parasitic male calibrated to clone himself, himself, himself, himself...

The arsenal of seminal chemicals men shoot into heterosexual women serve this end. These chemicals subdue women, make women receptive Y-hosts, at no or optional cost to men, but at great cost to women, who unwittingly abdicate their lives for the cause. From the male biological perspective, women's bodies and lives are merely resources for Y-perpetuation, an energy substrate, the seed coat they feed on, food for the Y-worm. This is why males can't see females as anything more than material bodies which exist to serve male needs, – service-providers, domestic servants, personal transcriptionists, – things to be owned and used – functional objects, – and why – *never-ever* – even if feminists inherit the Earth – will males see females any other way. (Nigel just a dude who gets blown for his tact).

Semen has evolved, not figuratively, but literally, *to narcotize females into Y-perpetuation*. This is both easily evolved and easily “continuously improved,” – because those chemicals in semen which do the job on women likely result in Y-copies – and are therefore passed down into the next round of dudes. Males of this new generation who “refine” their seminal chemicals on females are also likely to score their own Y-copies, passing their “improvements” in male chemical munitions down to the new batch of dudes, etc.

*

We live in a time when we think we have free will. We have lost the ability to see ourselves as animals. We are even less able to see ourselves as made of and managed by chemistry. But as astrophysicist Neil de Grasse Tyson asked: “What is Biology if not the most complex expression of Chemistry we know?” We should never underestimate how chemistry controls us. And yes, at the same time, as a Laureate in Literature said when asked about free will: “Of course I believe in free will. *I have no choice.*”

To preface: Research presented here on the manipulation of females by seminal fluid is not intended to enable heterosexual women in het-hell to justify why they've stayed or why they're staying, and Under No Condition does Trust Your Perceptions accept the use of this research for any-such-kind of cowardly shit.

Also, some womxxn may be creeped out by pictures of semen and sperm, and Trust, initially, wasn't gonna subject y'all. But hystorically, womxxn have not been allowed to look at the biological basis of men. And so we should. – This is especially important in the Age of T(y)ranny. – Patriarchy's avant-garde effort to destroy any remnant ability we may have to trust our perceptions.
